## **DETAILED ACTION**

### ***Election/Restrictions***

Claims 9-20 withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected groups, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on May 5, 2009.

Applicant's election with traverse of group (I) claim 2-8 in the reply filed on May 5, 2009 is acknowledged. The traversal is on the ground(s) that "Examiner can search and examine the entire application without serious burden". This is not found persuasive because the same references can not cover all the groups, and each group requires a separate search to cover the details of the limitations.

The requirement is still deemed proper and is therefore made FINAL.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claims 2-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Landau et al 5,638,164 in view of Deaett et al US 6,072,889.**

Referring to claim 2, Landau discloses in figures 1-3 a tracking system comprising: capturing at least one lower-resolution image within a field of view of the

Art Unit: 3662

missile warning system; identifying a threat from the captured lower-resolution image or images (col. 2:26-38);; identifying features surrounding the threat from a captured lower-resolution image utilized in identifying the threat (col. 2:31-33); capturing a higher-resolution image within a field of view of the fine tracking system; and identifying a location of a threat within this captured higher-resolution image as a function of the identified features (col. 2:39-45).

Landau does not teach sensing infrared radiation emitted by the threat. However, passive tracking systems are well known. Deaett teaches a similar tracking system where the system detects infrared light emitted by the threat. It would have been obvious to detect light emitted by the threat and not use a laser source since the target can be detected without using a transmitter.

Referring to claims 2-8, Landau teaches sensing infrared radiation (see col. 1:10-21), capturing a sequence of low-resolution images until a target is found “features”, or any other criteria “threshold” and identifying the threat from the high resolution image (see col. 2:62 to col. 3:21).

### ***Response to Arguments***

Applicant's arguments with respect to claims 2-8 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 3662

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
